Re: County Canyon Mine

Dear Mr. Cox:

I am enclosing a current copy of the Mining Plan, including changes to be sent to DOGM.

As discussed on the phone, drilling and blasting will be done with an airtrack rig with a 2" diameter drill. Ammonium nitrate will be the explosive used with a hole depth of 50'. Equipment will include an International TD20 bulldozer, either a Clark 125 or Trojan 3000, and a 1970 Mack RS700L will be used as a water truck. Haul trucks will include trailer and pup and will carry 24 or 28 ton loads. Three to five trucks will be present during operations.

Sincerely,

Terry Kerby
Plant Engineer
